Sprint 4-1: Part 1

Github: https://github.com/UCCS-CS3300/group1_spring2020
Heroku: http://dog-friendly.herokuapp.com/
Website: http://dog-friendly.net/

Instructions: Create a document explaining what stories you added or what stories changed to meet customer requests/comments

The stories that we added/changed to meet the customer's requests/comments include:

We were able to finish the log-in feature, however it is only working on our dog-friendly.net website. This is due to o-auth and heroku complications (Seems like we cannot use o-auth with subdomains). Most of this last sprint has been spent on improving our testing coverage percent due to how low it was in the last sprint (21.29%). We also finished setting up a Jest testing environment and created jest tests for our javascript files.

The user.rb file was completely rewritten to adjust for proper use of the user login feature. We adjusted the About Us page to distinguish it more from the homepage. We added different photos and added a team description portion to the about us page.
